

BREATHE CLEAN AIR

AIRVAC

air vacuum corporation

FIRST RESPONDER HEALTH IS OUR PRIORITY

**No Hoses: The Only Hoseless
System with a 360° Airflow Design**

PROBLEM: First responders have a greater risk for diseases and other health issues due to prolonged, uncontrolled exposure to diesel exhaust and particulate matter.

FACT: You can minimize their exposure and risk by automatically controlling the spread of hazardous contaminants in your station.

SOLUTION:

AIRVAC
911
Engine Exhaust Removal System

100% Source Coverage

Free Proposal & Site Assessment – AirVac911.com/FreeProposal

Automatically Monitor and Remove Hazardous Contaminants from Your Station.

FACT: Stations are full of toxic gases that hover in the air, unseen, causing damaging health effects. Only some toxic gases are captured by on-board filters and hose systems.

FACT: When vehicles leave the station they send a burst of engine exhaust back into the building, "Engine Exhaust Backwash." After a fire, off-gassing of turnout gear, hoses and parked vehicles pollutes the station's "Breathing Zone" again.

FACT: Diesel exhaust contains gases, particulate and potentially toxic compounds. Standard activated carbon filters and low efficiency media don't provide the level of removal necessary.

FACT: During a fire, cancer-causing chemicals contaminate exposed gear, vehicles and tools. When first responders return to the station with these items, the chemicals invade their "Breathing Zone."

SOLUTION: **AIRVAC 911®** is the only hoseless system with a 360° airflow design so powerful it pulls air up and out of the breathing zone and returns clean air in all directions. This continuously eliminates exhaust dead spots and captures toxins lurking in your station.

SOLUTION: **AIRVAC 911®** is the only system that continuously monitors and filters 100% of these apparatus Bay Area Hot Zones. Our system also addresses emissions released from lawn equipment, chainsaws, generators and more.

SOLUTION: The **AIRVAC 911®** 4-stage filtration system features a unique combination of chemically treated carbon and activated carbon filters designed to remove these hazardous contaminants and create a clean "Breathing Zone."

SOLUTION: **AIRVAC 911®** automatically removes particulate and gases 24/7 with its technologically advanced control system and filter combination. No hoses or vehicle attachments, no ducting, no exhausting outside and no interference with daily operations.

“ The **AIRVAC 911®** systems removed the fumes inside our station better than the hose system because of the area they cover. This eliminates having to hook up apparatus. In my opinion, these systems are the best by far for safety concerns. ”

— City of Chattanooga Fire Department, TN
